

Introduction MÁV

Infrastructure management activity

As the operator of the largest part of the Hungarian public railway network, MÁV Zrt supervises the operation of roughly 7,000 kilometres of railway and the related necessary infrastructure. The parent company's division dedicated to this activity, and with the greatest number of employees, carries out the complete scope of operation, traffic control and maintenance activities, as well as the some of the renovation works. The special division performs a variety of activities using its own resources, while aiming to save on cost. MÁV's railway network is used by 52 railway companies, to whom the company provides its various services.
